

Picture Book Application for One Laptop per Child

Presented by Dan Wexler

Introduction

- Educational Software for students in grades 1 – 5.
- Combines a simple text editor with graphics capabilities.
- Very useful and effective environment to facilitate student writing.
- Created for OLPC Program

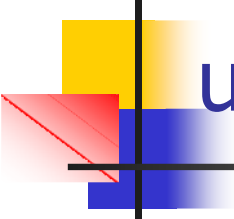

Purpose: Useful/Effective Writing App for Students

- Adds graphics and creativity to writing process
- Makes writing more enjoyable for students
- Writing is a core skill – 3Rs
- Practical – easy for students to use, and teachers to work with (no programming involved)

Target Audience

- **One Laptop Per Child (OLPC)** – Potential to reach millions of children
- Laurence School – good testing environment
- Elementary Schools
- Elementary School Children

Storybook Weaver. Application currently used by schools for creating picture books

Severely limited:

- Extremely limited drawing tools
- No ability to import graphics
- Frequent crashes and file corruptions
- It takes 2 – 3 minutes to save a document of about eight pages
- Cannot copy and paste edited or user-generated graphics
- Cannot specify the save location when exporting as html
- Does not run on Linux

Basic Specs

- Everything must be easy to use, and kid friendly: Big Buttons, simple interface, intuitive icons, etc.
- Text editor, like *Wordpad*
- Library of graphics students can drag and drop into the workspace
- Simple graphics-editing and creating program, like *Paint*
- Create multi-page documents
- Import graphics

More Specs

- Platform independence – optimized for OLPC laptops running Linux
- Very thin
- Layer graphics
- Save project as web page
- Download and install app from web

Squeak – Proposed Development Platform

- Squeak is one of five languages with built-in support in the OLPC laptops
- Object-oriented – based on Smalltalk
- Open Source
- Cross Platform/OS/Hardware
- Supports multilingual apps
- Co-developed by Alan Kay – prof at UCLA
- Used for multimedia and education apps
- Powers the etoys application which is shipped in all OLPC machines
- Large online Squeak community
- At least one widget that can be used for this program has already been developed - Bookmorph
- Has numerous education apps, but most involve simple programming, and are for older students

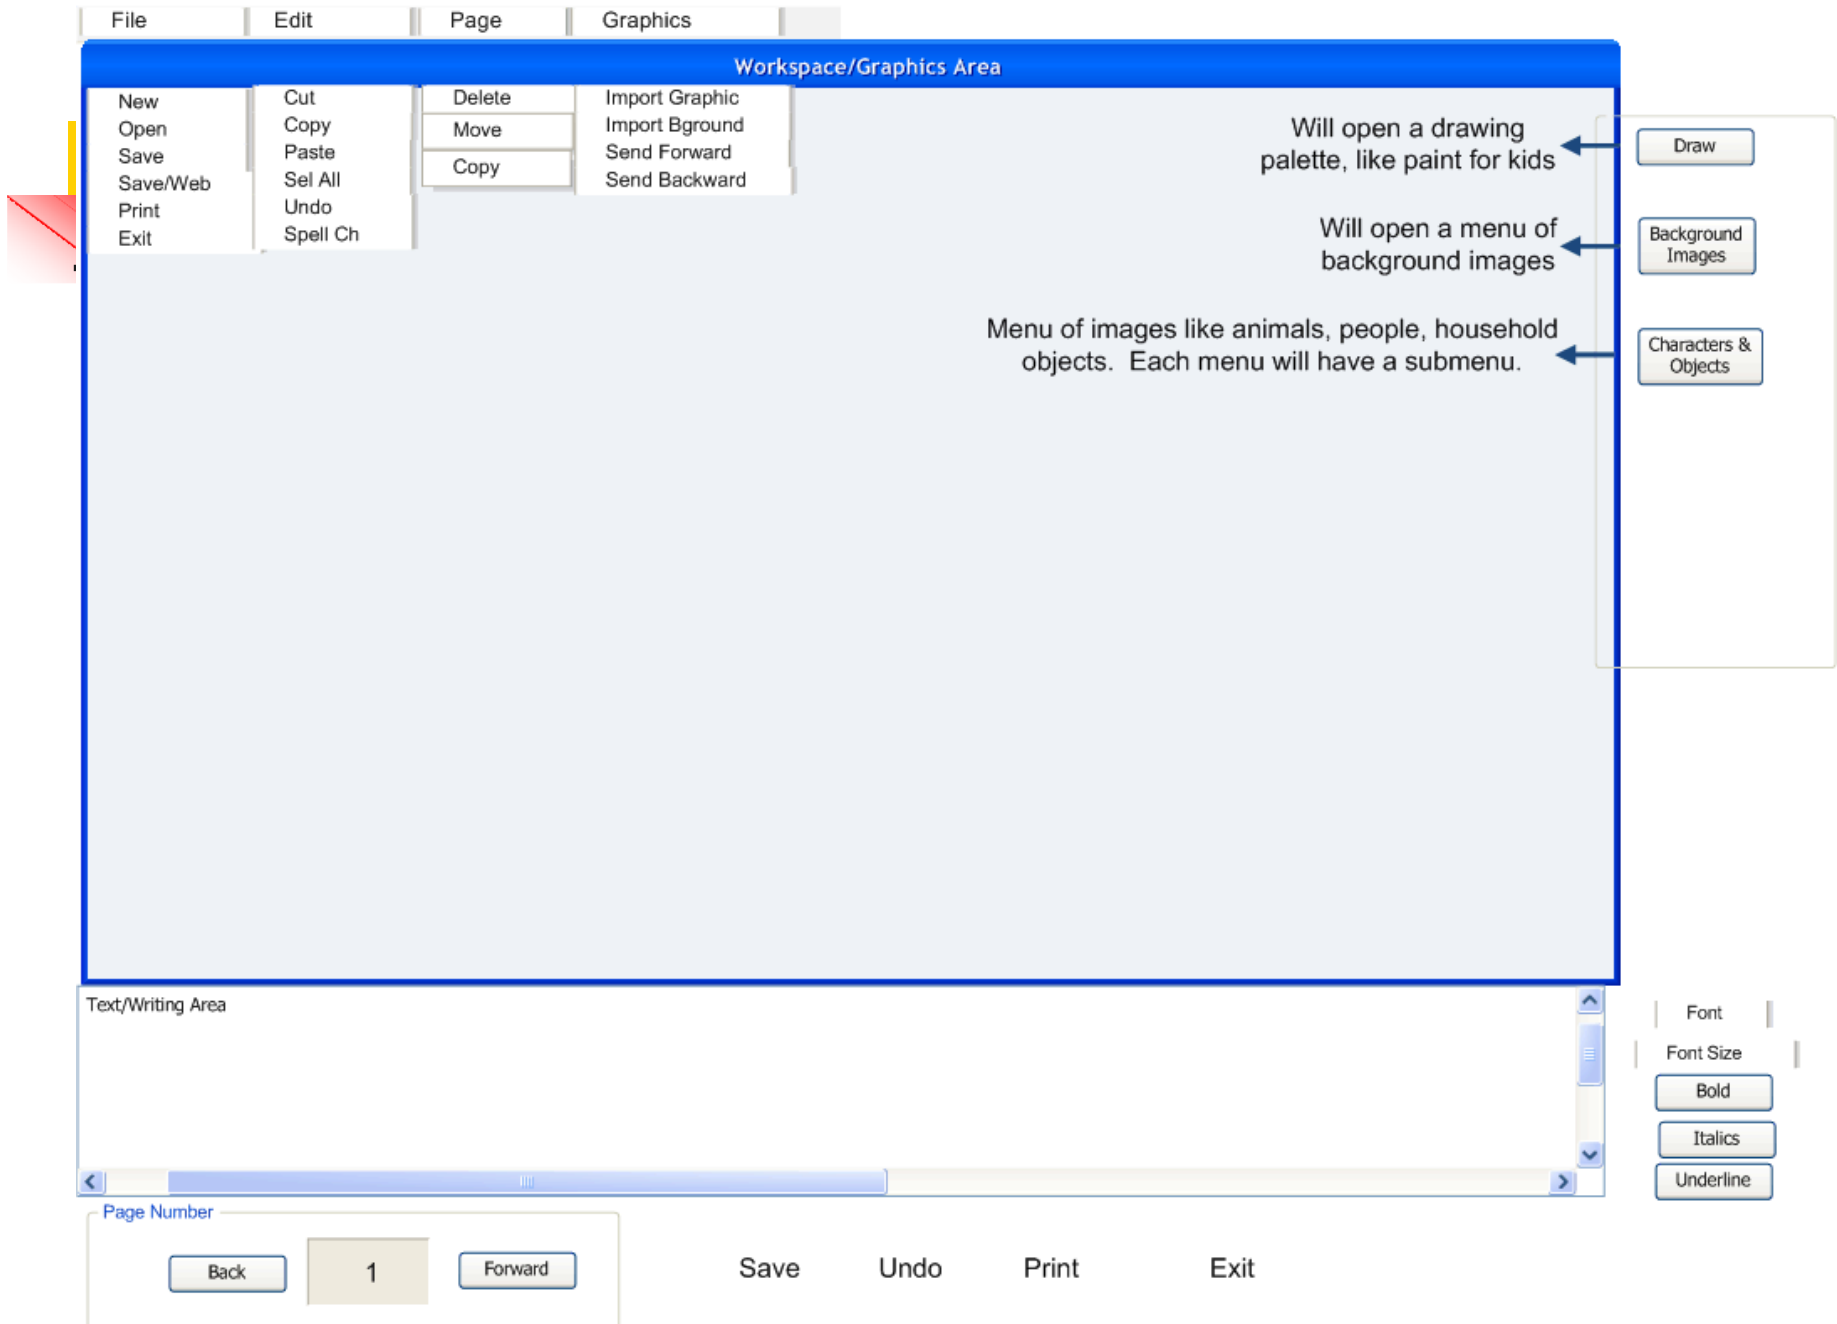

One Laptop per Child - OLPC

- Produces cheap laptops (\$140) to children in developing nations
- Non profit organization
- Most of the 2 billion children living in the developing world receive inadequate education - improve these children's ed. through tech
- Led by Nicholas Negroponte from MIT Media Lab
- Alan Kay, a prof at UCLA's CS Dept. is a collaborator
- Supports Squeak
- All software is open source – OLPC provides source code for all of its apps
- Has ed. software already written, but nothing like *Picture Book*
- Has software we can use in our app, like a Paint app, and the Cairo 2D graphics library/API
- Has a hosting site/source code management system for OLPC projects, like sourceforge
- Beta 2 machines have been deployed to children in launch countries
- Has orders of over 1 million laptops from countries throughout the world
- Partner with AMD, Red Hat, Real Networks
- Connects to Internet and other OLPC laptops through Mesh network
- Only 512mb of storage (flash memory)
- Can be powered by a hand crank
- OLPC community is looking for developers to create, "Educational applications of all sorts ."
- We are applying to receive a few OLPC laptops to test the Picture Book application on

OLPC Children's Machine XO

Mock Up

More About Graphics

- Adding graphics to the graphics library should be like installing fonts
- Open architecture so a designer can save graphics into the graphics folders and they will be part of the graphics library
- I can have a designer create a handful of graphics for us to work with

Challenges

- Making the graphics engine work
- Making this work on a \$140 laptop with 512 Mb. storage, with a 7.5 inch screen, 1200 x 900 pixels.
- Making the software thin and the files small
- Developing an attractive, kid-friendly interface
- Saving as html

About Me

- Elementary School Tech Director
- Completed Master's in Ed. Tech. from UCLA Grad School of Ed.
- Very basic programming experience
- Available to meet evenings
