

## Homework 4: MiniJava $\rightarrow$ Piglet

Grammars for MiniJava and Piglet in JavaCC notation are on the CS 352 webpage.

Use JTB/GJ and JavaCC and write in Java one or more visitors which compile a MiniJava program to Piglet.

Your main file should be called `J2P.java`, and if `P.java` contains a *syntactically* correct MiniJava program, then

```
java J2P < P.java > P.pg
```

creates a Piglet program `P.pg` with the same behavior as `P.java`.
